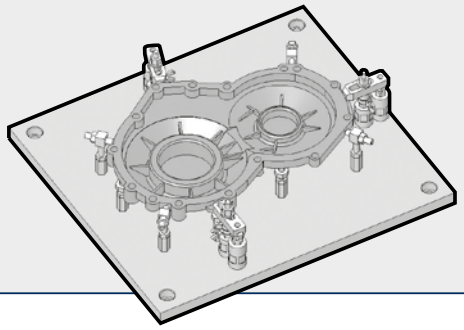
FAST CLAMPS

Fast Clamps

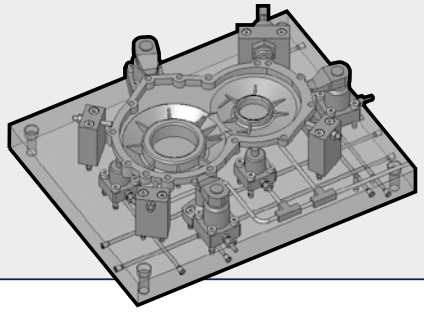
Speedier In Setup Than Conventional Manual Clamping

No tools needed



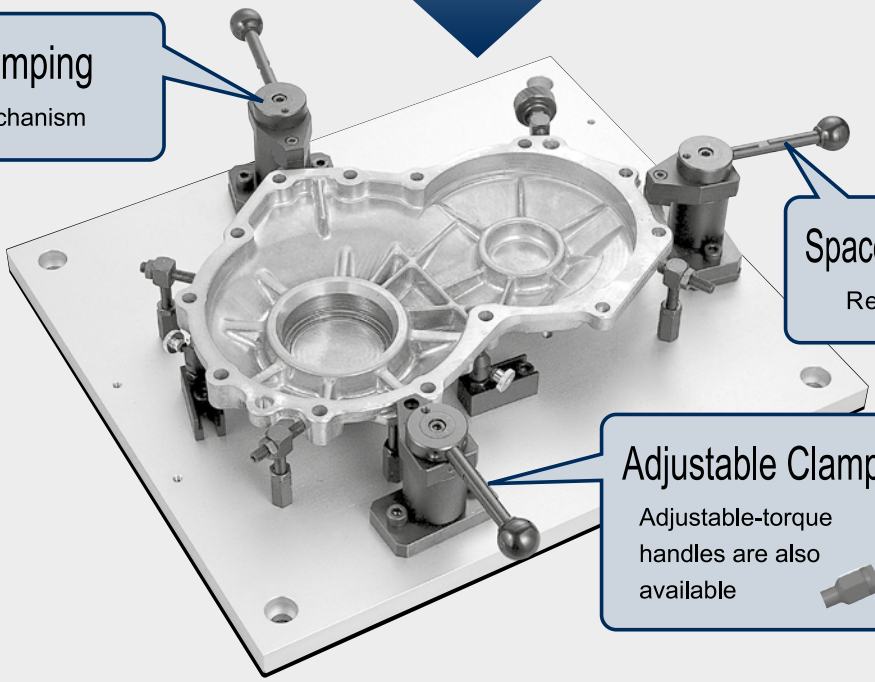
More Economical Than Hydraulic Clamping

Much lower fixture costs
Maintenance free



Positive Clamping

Spiral cam mechanism

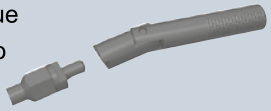


Space-Saving Design

Removable handle

Adjustable Clamping Force

Adjustable-torque handles are also available



Fast Clamps serve for varied applications in machining and assembly jobs in different industries.

Die-Cast Parts

Cast-Iron Parts

This extended line of Fast Clamps allows clamping parts made from materials ranging from non-ferrous metals like aluminum, zinc, etc. to cast iron and steel.

Setting a clamping force is important when clamping a part that can easily get strained.

To compensate for variations between castings, a long clamping height range is needed. Clamping force is also an important factor for castings that receive a comparatively heavy load when being machined.

Clamp Arm Installation/Removal Instructions

To install a clamp arm,

1. Fit it onto the shaft getting the stop pin received in the stop-pin slot provided on the clamp-arm bottom.
2. Place the adaptor head onto the shaft getting the shaft fitted into the shaft-receiving pocket in the adaptor head, and then lock the adaptor head using a hex. socket head cap screw.
3. Tighten the ball plungers inside the clamp arm.

To remove the clamp arm, follow the above steps back.

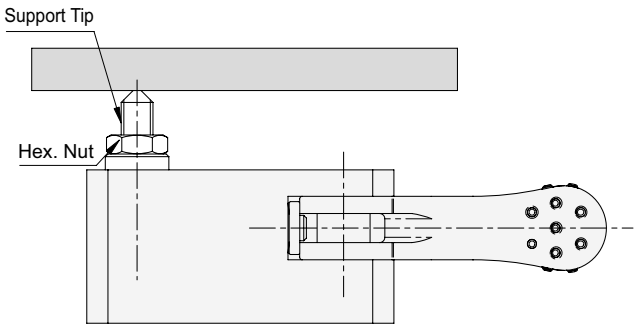
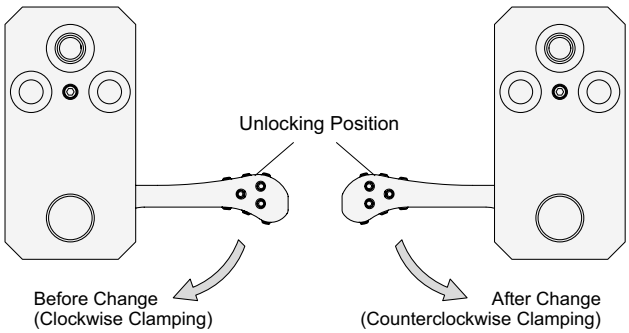
Adjusting Handle Locking Position

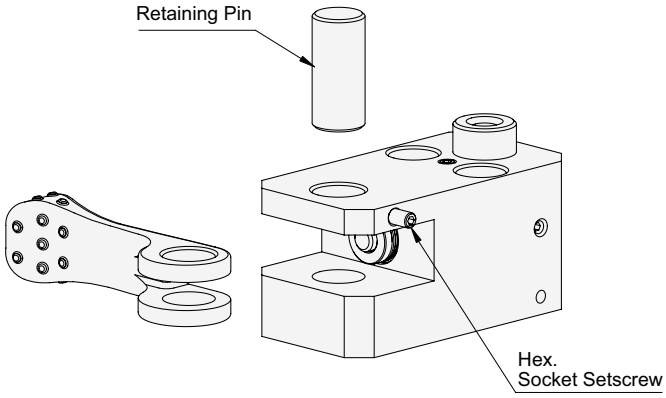
Ensure before use that the handle comes to the recommended position when the piston is locked, by adjusting the height of a support tip.



Changing Clamping Direction

Loosen the hex. socket setscrew to remove the retaining pin. Turn the handle upside down and put it in position again.





The built-in disc spring prevents loosened locking.

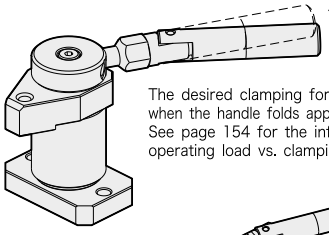
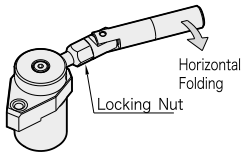
QLTL120/QLTL120-RL : 30N to 120N
QLTL160/QLTL160-RL : 50N to 160N

Note : Ensure that the operating load is not set below the lower limit to prevent the handle from returning to the unclamping position due to shock load generated during the transfer of machine pallets.



The desired clamping force is reached when the handle folds approximately 15° See page 154 for the information on operating load vs. clamping force.



Note : Ensure that the handle is set to fold horizontally.

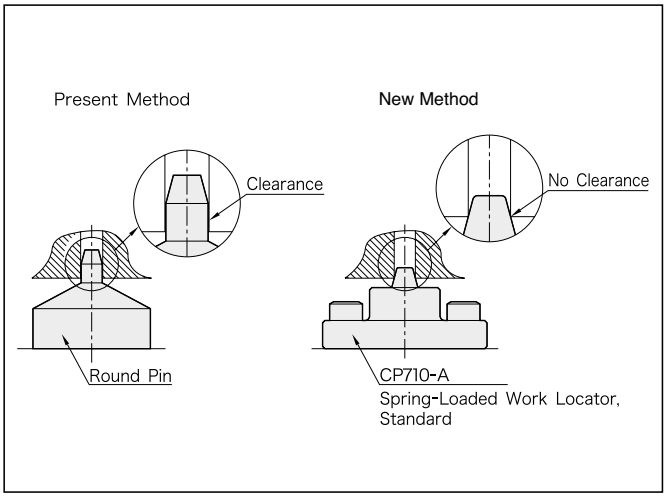
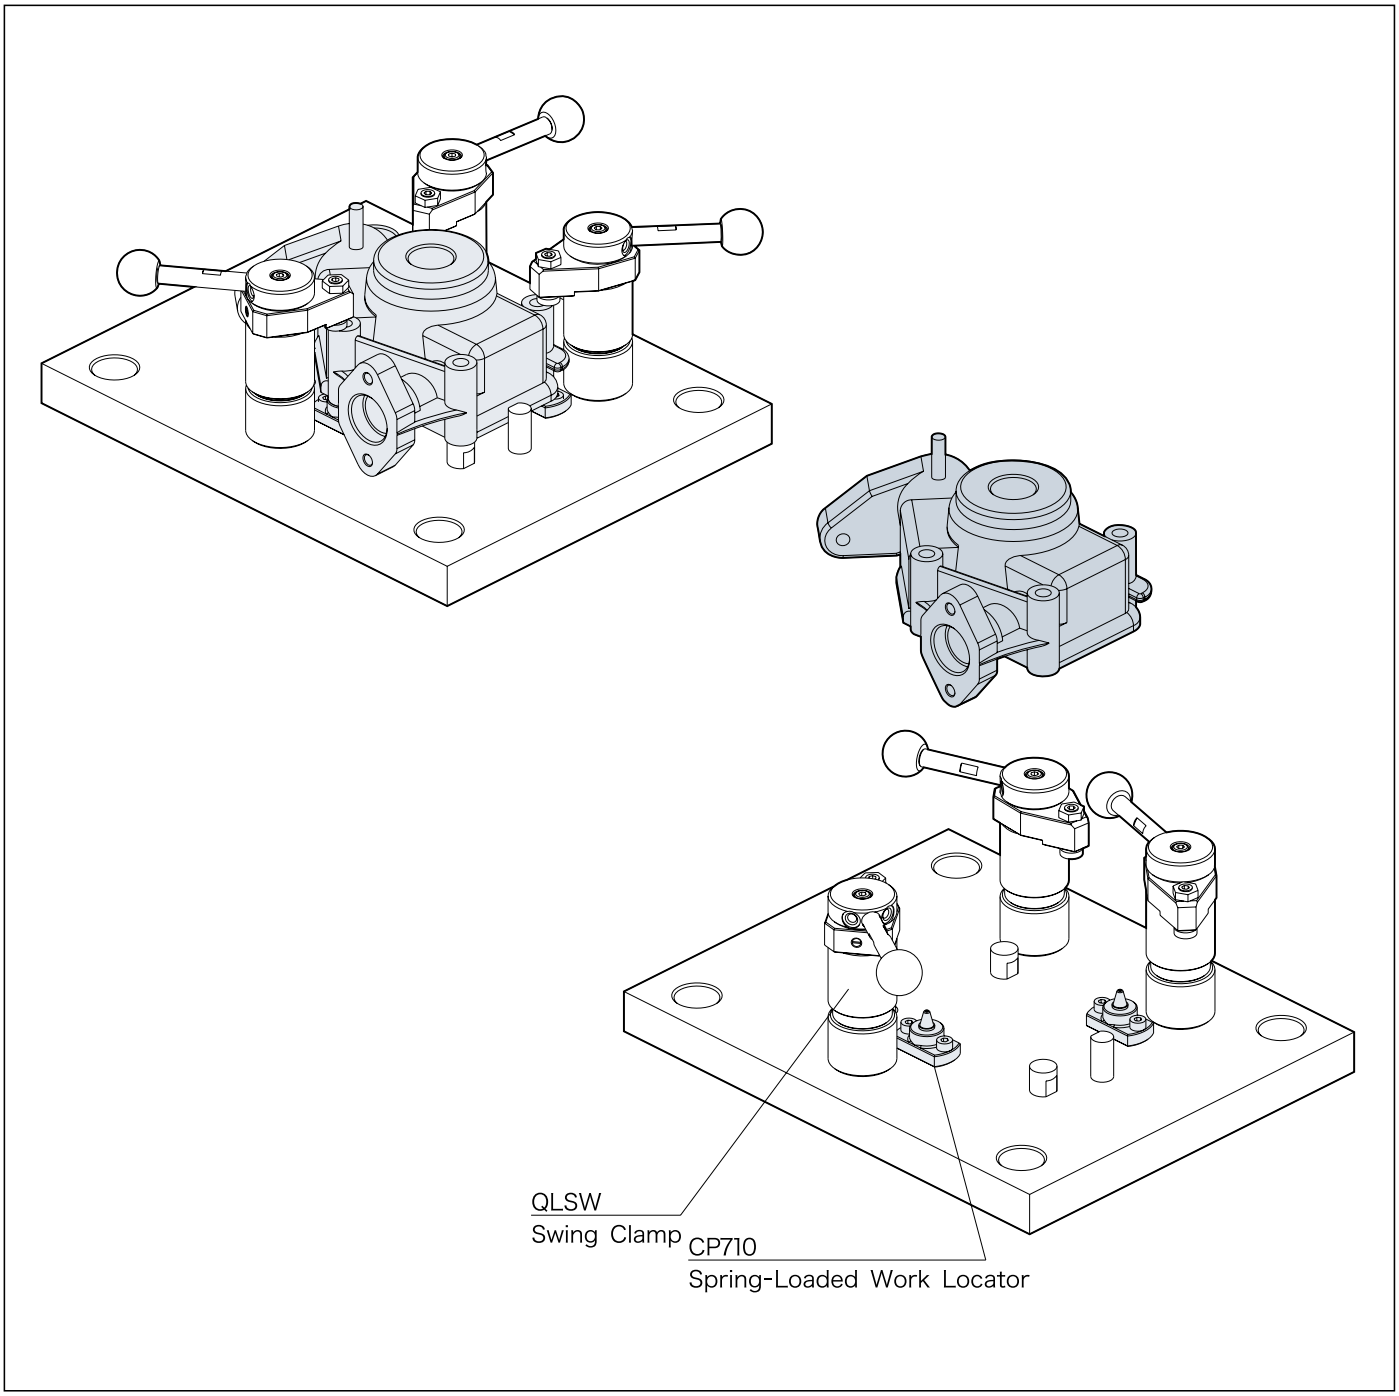
When the workpiece is set, the tapered pin is pressed down to locate it. The accurate style allows vertically as well as horizontally positioning the workpiece with accuracy.



Use of tapered pin allows secure locating with no clearance between the locating hole and the tapered pin.



Note: In clamping, hold down the workpiece by hand to avoid lift that can be generated by spring force.

Our Method

No galling caused

The locating pin gets projected only after the workpiece is set on supports. This allows loading and unloading the workpiece smoothly, with no galling. Get the locating pin projected to locate the workpiece after it is roughly positioned with the help of locating guides.

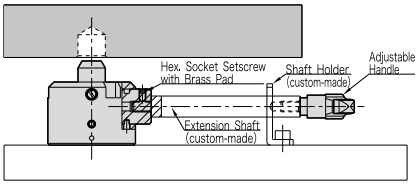
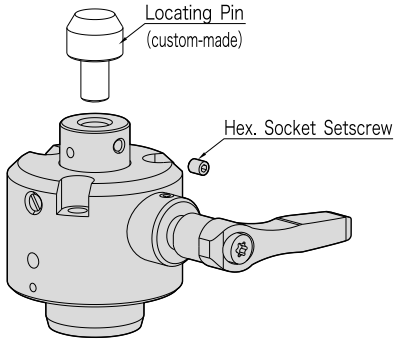
How To Use

Extended Application



With an extension shaft and a shaft holder prepared separately, the handle control can be easily done even when small space is available under the workpiece.

Locating-Pin Mounting



Projected Mode

A locating pin can easily be mounted by using a hex. socket setscrew when the piston is fully projected (locating pins must be prepared separately).

Features

- Can support heavy workpieces made from steel or cast iron
- No tools needed
- Different locating pins can be mounted depending on workpiece's locating holes.
- The piston stays locked when it is fully projected or retracted until the handle is operated again.

How To Use

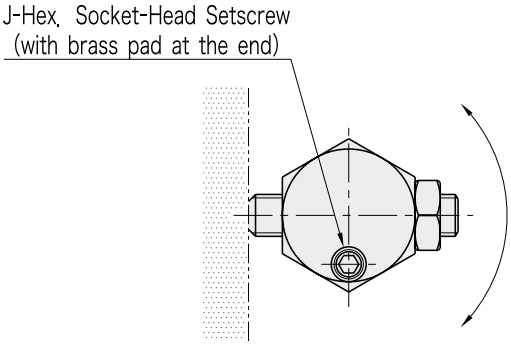
*) Minimize this clearance when installing.



Installation Information
1. Screw in the body completely.
2. Screw back the body and set the adjustment screw.
3. Tighten up the hex. socket-head setscrew to lock the body.

·Use to stop a low-profile workpiece.

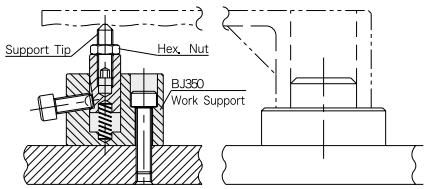
Application Example



Ideal for preventing the workpiece from chattering and deflecting.

- The positive locking mechanism offers high support capacities.
- The above support capacity values are reached when the ball thumb screw is fully tightened.

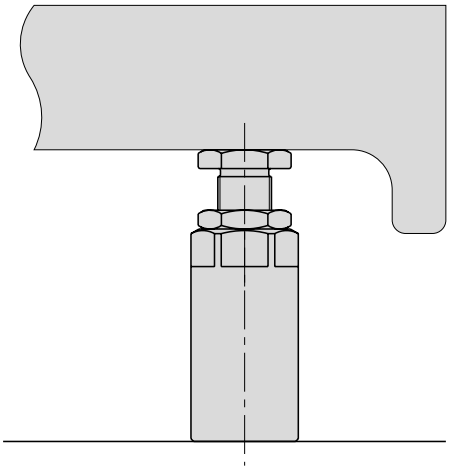
Note : The stated values of both "Support Capacity" and "Allowable Screw Torque" are based on the manual operation of the hand knob.

How To Use

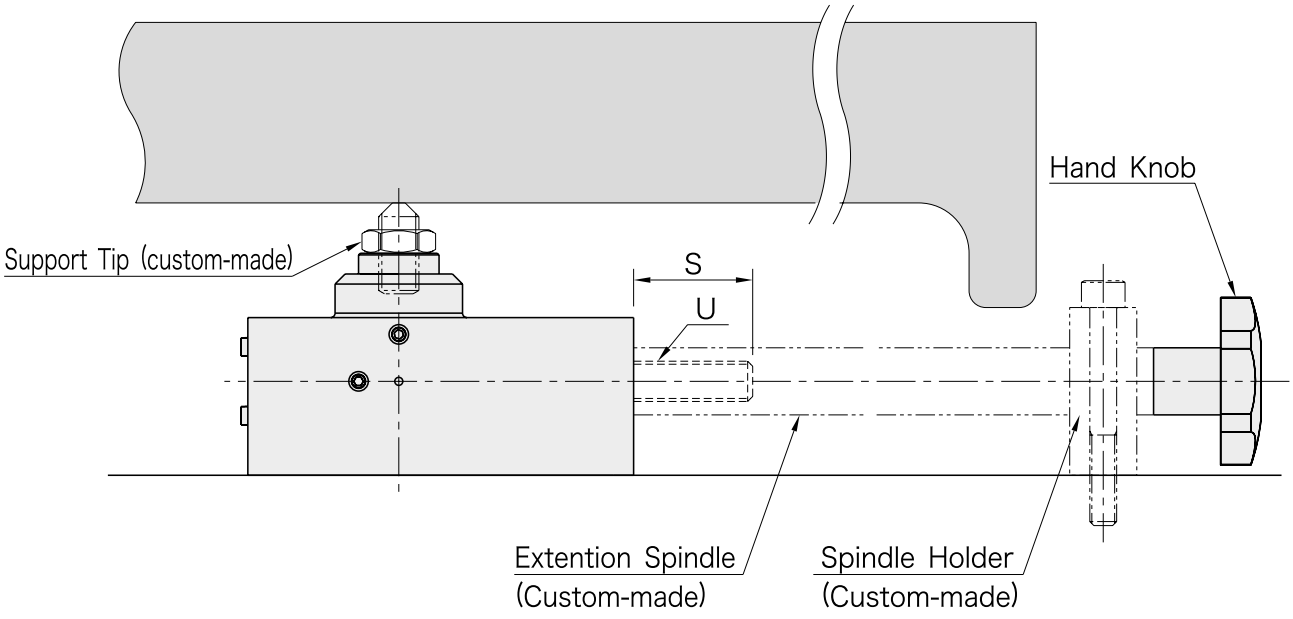
Conventional Method

Cumbersome height adjustment with a wrench
Limited positioning area



Extendable Work Support Method

Easy height adjustment with a hand knob
Flexible positioning



·Connecting an extention spindle allows adjusting the part height with ease.
·Provide a tapped hole for the extention spindle for connection, as specified in chart above.

Application Example

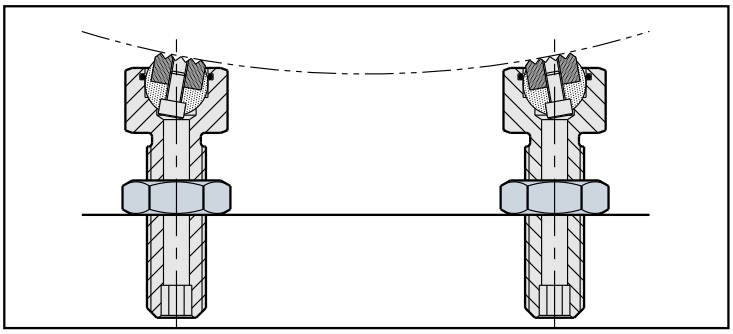
• Ideal for workpiece positioning and positive holding.



• Can also be used as screw jacks.

How To Install Tip

• Push the ball out of the body and then secure the tip to the ball using the included hex. socket-head cap screw.
